Executive Summary

The Department of Health– Abu Dhabi (DOH) is the regulatory body of the healthcare sector in the Emirate of Abu Dhabi and ensures excellence in healthcare for the community by monitoring the health status of its population.

The Emirate of Abu Dhabi is experiencing a substantial growth in the number of hospitals, centers and clinics. This is ranging from school clinics and mobile units to internationally renowned specialist and tertiary academic centers. Although, access and quality of care has improved dramatically over the last couple of decades, mirroring the economic upturn and population boom of Emirate of Abu Dhabi, however challenges remain in addressing further improvements.

The main challenges that are presented with increasingly dynamic population include an aging population with increased expectation for treatment, utilization of technology and diverse workforce leading to increased complexity of healthcare provision in Abu Dhabi. All of this results in an increased and inherent risk to quality and patient safety.

DOH has developed dynamic and comprehensive quality framework in order to bring about improvements across the health sector. This guidance relates to the quality indicators that DOH is mandating the quarterly reporting against by the operating general and specialist hospitals in Abu Dhabi.

The guidance sets out the full definition and method of calculation for patient safety and clinical effectiveness indicators. For enquiries about this guidance, please contact jawda@doh.gov.ae

This document is subject for review and therefore it is advisable to utilize online versions available on the DOH at all times.

About this Guidance

The guidance sets out the definitions and reporting frequency of Jawda Post Acute Rehabilitation (PAR) performance indicators. The Department of Health (DoH), in consultation with local PAR experts has developed Post Acute Rehabilitation (PAR) performance indicators that are aimed for assessing the degree to which a provider competently and safely delivers the appropriate clinical services to the patient within the optimal period.

The Jawda KPIs in this guidance include measures to monitor morbidity in inpatient rehabilitation patients receiving PAR services.

Who is this guidance for?

All DoH licensed healthcare facilities providing PAR services in the Emirate of Abu Dhabi.

How do I follow this guidance?

Each provider will nominate one member of staff to coordinate, collect, monitor and report PAR quality indicators data as per communicated dates. The nominated healthcare facility lead must in the first instance e-mail their contact details (if different from previous submission) to JAWDA@doh.gov.ae and submit the required quarterly quality performance indicators through Jawda online portal.

What is the Regulation related to this guidance?

- Legislation establishing the Health Sector
- As per DoH <u>Policy for Quality and Patient Safety</u> issued January 15th 2017, this guidance applies to all DOH Licensed Hospitals providing PAR services in the Emirate of Abu Dhabi in accordance with the requirements set out in this Standard.

KPI Description (title)	Rate of emergency attendance
Domain	Process
Sub-Domain	Effectiveness
Definition:	Rate of emergency department or urgent care visits by PAR patient (all ages) without being admitted to the hospital within the measurement quarter.
Calculation:	Numerator: Number of all unplanned visits to the Emergency Department (ED) or urgent care by PAR patients (all ages) within the measurement quarter. (Count the attendance rather than the number of patients).
	For definition of unplanned care and medical emergency, please refer to DOH (HAAD) Standard for Emergency Departments.
	<u>Denominator:</u> A count of the total number of PAR patient days (all ages) during the measurement quarter.
	Denominator Exclusions: PAR inpatients in acute care facilities with PAR services (included in the license). Rate is calculated by the number of ED or urgent care visits during the measurement quarter, divided by the total number of patient days (all ages) during the same period and multiplying by 1000.

KPI	Catheter-associated Symptomatic Urinary Tract Infection (CA-SUTI)
Description	per 1000 patient days
(title):	
Domain	Patient safety
Sub-Domain	Complication The measure reports the DAD petients with an induction setheton who have a
Definition	The measure reports the PAR patients with an indwelling catheter who have a urinary tract infection in the measurement quarter.
	Date of Event: The date when the first clinical evidence (signs/symptoms) of the UTI appeared or the date the specimen used to meet the infection criteria was collected, whichever comes first. Indwelling urinary catheter: A drainage tube that is inserted into the urinary bladder through the urethra, is left in place, and is connected to a drainage bag/collection system (including leg bags); also called a Foley catheter. Indwelling urinary catheters do not include straight in-and-out catheters or suprapubic catheters.
	Indwelling urinary catheters which have been in place for >14 days should be changed prior to specimen collection, but failure to change catheter does not exclude a UTI for surveillance purposes. If a patient is transferred to the facility with an indwelling urinary catheter in place, and the facility replaces the catheter with a new one while the patient is in the care of the facility, then the date of insertion of the device corresponds to the date the new catheter was placed in the PAR facility.
Population	All PAR patients with an indwelling catheter who are being cared for in the PAR facility
Calculation	Numerator: All patients that develop signs and symptoms of a UTI in the measurement quarter while having an indwelling urinary catheter in place or removed within the 2 calendar days prior to the date of event, where day of catheter removal is equal to day 1 (urinary catheter is in place on the day of event or the day before the event).
	ICD 10 CM Code: T83.511A
	Patient must meet both criteria 1 AND 2:
	CRITERION 1: One or more of the following (Signs and Symptoms and Laboratory and Diagnostic Testing): 1. Fever+[Single temperature ≥37.8°C (>100°F), or >37.2°C (>99°F) on repeated occasions, or an increase of >1.1°C (>2°F) over baseline] 2. Rigors 3. New onset hypotension, with no alternate non-infectious cause 4. New onset confusion/functional decline with no alternate diagnosis AND leukocytosis (>14,000 cells/mm3 or Left shift [>6% or 1,500 bands/mm3]) 5. New or marked increase in suprapubic tenderness 6. New or marked increase in costovertebral angle pain or tenderness 7. Acute pain, swelling, or tenderness of the testes, epididymis, or prostate 8. Purulent discharge from around the catheter insertion site AND

CRITERION 2: Any of the following: If urinary catheter removed within last 2 calendar days: 1. Specimen collected from clean catch voided urine and positive culture with no more than 2 species of microorganisms, at least one of which is a bacterium of ≥10⁵ colony-forming units (CFU) / ml 2. Specimen collected from in/out straight catheter and positive culture with any number of microorganisms, at least one of which is bacterium of $\geq 10^2$ colony-forming units (CFU)/ml. If urinary catheter in place: 3. Specimen collected from indwelling catheter and positive with any number of microorganisms, at least one of which is a bacterium of $\geq 10^5$ colony-forming units (CFU)/ml. + Fever can be used to meet CA-SUTI criteria even if the patient has another possible cause for the fever (e.g., pneumonia). Inclusion: To be considered a CA-SUTI, the indwelling catheter must be in place for >2 calendar days on the date of event, with day of device placement being Day 1. Only UTI events presenting > 2 calendar days after admission (where date of admission is equal to day 1) are considered PAR facility onset events. Exclusion: If a patient is transferred from an acute care facility and develops signs/symptoms of a UTI within the first 2 calendar days of admission to the PAR facility, it would be considered present at the time of transfer to the PAR facility. This case would not be included in the numerator for the PAR facility. **Denominator:** Catheter-days: Number of patients with an indwelling urinary (Foley) catheter collected daily for all patients in the facility. These daily counts are summed and only the total for the measurement quarter is entered. Exclusion: None of the following urinary management devices should be included when counting indwelling catheter-days: suprapubic catheters, straight in-and-out catheters, or condom (male only) catheters. Rate calculation: CA-SUTI incidence rate/1,000 catheter-days = Number of patients with CA-SUTI / Catheter-days x 1,000 Reporting Quarterly Frequency **Unit Measure** Rate per 1000 urinary catheter days (PAR) https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-International <u>Instruments/IRF-Quality-Reporting/Downloads/IRF-Measure-Calculations-</u> comparison if and-Reporting-Users-Manual-V31-508c.pdf available Desired Lower is better Direction Patient medical record, Laboratory data **Data Source**
