

Standard 2 - Patient Name

Inconsistent data entry for names directly compromise patient safety by preventing clinicians from accessing a unified medical history, which can lead to life-threatening medication errors or redundant procedures. To eliminate these risks and prevent the creation of duplicate records, all facilities must treat the legal identity document such as Emirates ID or Passport to capture Patient Name, Date of Birth and Nationality.

Requirement

Data Item	Description	Data Type	Example	Required / Optional
Full Name	Legal name as per identity document	String	Use a multi-field format: [First Name] [Middle Name] [Family/Last Name] .	Required. Should be captured automatically via EID scan. In absence of EID, manual entry must follow this exact format. Name must exactly match the Passport/Emirates ID English spelling. Constraint: Avoid using titles (Mr., Dr, etc.) or nicknames if entered manually.

Timeline - 6 months from circular issue date.
